

COM Library Data Sheet

CELSCAT® *Timetabler* 6 COM Library is a programming interface to the *Timetabler* software, providing read/write access to the timetable data using a language-independent, object-oriented library.

The COM Library allows you to develop your own software tools and applications that use and/or modify *Timetabler* data in a bespoke way.

Features

- Easy to use, high-level COM object hierarchy.
- Support for all modern Windows development tools including VB, C#, C++, etc.
- Royalty-free redistribution.
- High-level abstraction from database schema.
- Comprehensive documentation of all objects and their methods/properties.
- Over 20 high-level COM objects.

Benefits

- Makes it safe to write to *Timetabler* database without knowledge of the schema.
- Facilitates bespoke reporting.
- Provides a mechanism for data exchange between *Timetabler* and other applications.
- Encourages in-house expertise and integration of systems.

Sample Code

Please visit our web site for sample code and applications built using the CELSCAT COM Library:
